

Mexican BRTs scheduled with the best planning system

The Integrated Transport System of León (Guanajuato) relies on the experience and the efficiency of GOAL SYSTEMS

MEXICO. Goal Systems has recently signed an agreement with the BRT system of León (Guanajuato) for the first phase of the scheduling and the optimization of its urban transport system. This agreement allows the Spanish company to plan the five main routes of the BRT, with a total of 103 articulated buses, for the next three years, due to the acquisition of GoalBus® Regulatory Authority licenses.

Through this operation, Goal Systems adds its knowledge and technology to the pioneer BRT system in Mexico (León); making the three, fully functional BRT systems in the country (Macrobus, Metrobus and Optibus) now planning their operations with our company.

ALSA and GOAL SYSTEMS, the perfect duo to "move" Malta

The two Spanish leading companies will manage the transportation services of the Mediterranean country

MALTA. The Maltese government has granted Alsa group -through its subsidiary Autobuses de León- the complete management of the urban and interurban transport of its islands, for which the company will use the experience and the knowledge of Goal Systems in terms of planning and optimization.

Rio's BRT acquires GoalBus® and gets ready for the Olympic Games

GOAL SYSTEMS continues its expansion in the Brazilian market, having clients as important as Metro Rio or Recife already in the country

BRAZIL. The Rio de Janeiro BRT has recently awarded the planning of the 296 rapid transit buses operated by the partnership, as well as the expansions planned for the Olympic Games, to the Spanish optimization company Goal Systems, with a vast experience in the sector and references in Brazil as important as Metro Rio, Recife or Grupo Guanabara.

This long-term agreement aims to include all the routes in the transportation system and wants to integrate in the next two years León's BRT systems with the feeder, the auxiliary and the remaining routes, in order to develop a

complete planning of the whole transportation system of the whole city.

With this alliance, Mexico recognizes once again the efficiency and power of the Goal Systems' tools to provide the best solution to its intelligent transportation systems, which, in case of León's BRT system, will affect in the future a total of 1,650 buses of its fleet.

Since the beginning of 2015, Alsa has chosen Goal Systems to implement its tools GoalBus® and GoalDriver® to manage the planning of the whole urban service: 335 buses and more than 100 lines covering the transportation of the whole country for the next five years.

From the management of the bus services and the scheduled timetables to the assignation of drivers and the distribution of shifts, the Spanish company, a pioneer and leader in optimization, will help Alsa in the planning of the current network as well as in the future reorganization of the necessary buses and services to give the best service in the islands at the lowest cost.

Alsa, which has signed with the Maltese government the provision of services for the next 15 years and will invest more than half a

million euro in this project, has chosen the efficiency of an innovating and successful company such as Goal Systems, which has been working for more than 20 years in this sector, adapting to fleets of all sizes and in markets as different as the European or the American, among others.

◀ From page 01

Since Brazil won the organization of the World Cup of 2014 and Rio the Olympic Games of 2016, the city has undertaken very important changes of its public transportation, promoting the BRT (lanes for high capacity buses), which is already changing the transport network, with more than 9 million passengers monthly.

The opening of TransOeste in 2012 and of TransCarioca in 2014, shortly before the World

Cup, have confirmed the modernization of the public transportation of Rio de Janeiro, updating not only the vehicles and infrastructures, but also the investments in the most innovative technology. The numbers of both lines are similar to the main lines of Transmilenio (Bogota), which has also chosen Goal Systems to manage its planning.

In March, the Rio de Janeiro's BRT system communicated Goal Systems its decision to negotiate with the winning team of the process opened last year, in which the company competed with international planning systems. Since end of March, Goal Systems plans all the buses of the company and expects to plan also the expansions for the Olympic Games, TransOlimpica and TransBrasil. This project confirms Goal Systems as undisputed international leader in transport planning systems in Brazil.

Since the end of March, GOAL SYSTEMS plans all the buses of the company
